

**Features**

- Peak equivalent or RMS or true peak detection
- Explosion proof certification\*
- Corrosion resistant
- ESD protection
- Overload protection
- Reverse wiring protection

**Benefits**

- Choice of output: RMS, true peak, and peak, permits you to choose the sensor that best fits your industrial requirements
- Provides continuous trending of overall machine vibration
- True peak is useful for detecting loose parts like valves on reciprocating machinery
- Can help guide maintenance
- Helps notify of impending equipment failure
- Hazardous area installation

The output of the PC420A Series is proportional to acceleration vibration. An output of 4 mA indicates a level of 0 g or no vibration present. A full-scale reading of 20 mA indicates the maximum range (peak or RMS) of vibration is present. The peak output units provide a computed equivalent peak level of vibration based on the RMS.

**Model PC420A explosion proof series Acceleration loop powered sensors (LPS™)**

**Output, 4-20 mA**

Full scale, 20 mA (±5%) .....	see table 1 on back
Frequency response:	
±10% .....	10 Hz - 1.0 kHz
±3 dB .....	4 Hz - 2 kHz
Repeatability .....	±2%
Transverse sensitivity, max.....	5%

**Electrical**

Power requirements (two wire loop power):

Voltage at PC420 Series sensor terminals.....	14 VDC min, 30 VDC max
Loop resistance <sup>1</sup> at 24 VDC, maximum.....	700Ω
Turn on time, 4-20 mA loop.....	< 10 seconds
Grounding.....	case isolated, internally shielded

**Environmental**

Temperature range .....	-40 to 85°C
Vibration limit .....	250 g peak
Shock limit .....	2,500 g peak
Sealing .....	epoxy sealed

**Physical**

Sensing element design .....	PZT ceramic / shear
Weight .....	380 grams
Case material .....	303 stainless steel
Mounting .....	3/8-24 x 3/8 depth tapped hole
Output leads, 18 AWG .....	4 meters long

\* CSA approval: class 1, division1, groups A, B, C, D.  
ATEX approval: EEx d IIC T3C  
EEx nA IIC T3C

Cable	Function
Red	loop positive (+)
White	loop negative (-)

Accessories supplied: SF20-2 mounting stud (International customers specify mounting requirements); calibration data (level 2).

**Table 1: PC420Ax-yy-EX explosion proof model number selection**

x (4-20 mA output type)	yy (4-20 mA full scale)
R = RMS output, acceleration	05 = 5 g
P = Equivalent peak output, acceleration	10 = 10 g
TP = True peak output, acceleration	20 = 20 g

Notes: <sup>1</sup> Maximum loop resistance ( $R_L$ ) can be calculated by:

$$R_L \text{ (max resistance)} = \frac{V_{DC \text{ power}} - 10 \text{ V}}{20 \text{ mA}}$$

DC supply voltage	$R_L$ (max resistance) <sup>2</sup>	$R_L$ (minimum wattage capability) <sup>3</sup>
12 VDC	100Ω	1/8 Watt
20 VDC	500Ω	1/4 Watt
24 VDC	700Ω	1/2 Watt
26 VDC	800Ω	1/2 Watt
30 VDC	1.0kΩ	1/2 Watt

<sup>2</sup> Lower resistance is allowed, greater than 10Ω recommended.

<sup>3</sup> Minimum  $R_L$  wattage determined by:  $(0.0004 \times R_L)$ .

Typical circuit
